# How Job Dispatch helps businesses with sales representatives?

Company EasyDESIGN sells graphic software. Sales representatives arrange meetings with potential clients to present their product. Executive Director wanted a clear overview about all arranged meetings and how effectively are the company's vehicles used. Therefore, he decided to start using Sygic Job Dispatch.

- 1.** Every sales team is responsible for assigned region. Each team member has to visit 20 potential customers per week and offer the product.

- 2.** Since workers are mobile and visit different places, their manager needs to be informed about their progress and use of company vehicles. The solution is Job Dispatch.

- 3.** The manager gets a complete overview of their movement thanks to the Job Dispatch application on their smartphones. The sales reps can check in on the spot, send information about arrival on site and the course of the meeting.

**4.** Management has everything under control and knows about current activities, travelled roads, tasks and meetings of their mobile employees.

**5.** A complete report and history of all tasks is available. Maps of travelled roads help to determine whether the company cars are used effectively.

**6.** Thanks to this simple and intuitive solution, which uses GPS of work mobile phones, the company saves on installation of expensive GPS devices in company cars.

There are many other ways in which you can use Job Dispatch for your business and easily manage your entire mobile workforce.
